-!- FUNCTION: Gastrin stimulates the stomach mucosa to produce and
secrete hydrochloric acid and the pancreas to secrete its
digestive enzymes. It also stimulates smooth muscle contraction
and increases blood circulation and water secretion in the stomach
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Phenylalanine amide (G-93 provides amide

Processing of the gastrin precursor. Modulation of phosphorylated,
eulfated, and amidated products.";
J. Biol. Chem. 265:21476-21481(1990).
-!-FUNCTION: Gastrin stimulates the stomach mucosa to produce and
secrete hydrochloric acid and the pancreas to secrete its
digestive enzymes. It also stimulates smooth muscle contraction
and increases blood circulation and water secretion in the stomach
                                                                                                                                                                                                                                                                                                                                                                                               Puller P.J., Stone D.L., Brand S.J.; "Molecular clonding and sequencing of a rat preprogastrin complementary deoxyribonucleic acid."; "Molecular cloud."; "Molecular c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            secrete hydrochloric acid and the pancreas to secrete its digestive enzymes. It also stimulates smooth muscle contraction and increases blood circulation and water secretion in the stomach and intestine.

-: SUBCELLULAR LOCATION: Secreted.
-: SIMILARITY: Belongs to the gastxin/cholecystokinin family.
                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MEDLINE=86309993; PubMed=3747718; DOI=10.1016/0024-3205(86)90283-3; Bonato C., Eng J., Pan Y.-C.E., Miedel M., Hulmes J.D., Yalow R.S.; "Guinea pig 33-amino acid gastrin."; Life Sci. 39:995-964(1986).

-I- FUNCTION: Gastrin stimulates the stomach mucosa to produce and secrete Hydrochloric acid and the pancreas to secrete its digestive enzymes. It also stimulates smooth musole contraction and increases blood circulation and water secretion in the stomach
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

--- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
--- SIMILARITY: Belongs to the Ser/Thr protein kinase family.
--- SIMILARITY: Contains 1 PH domain.

-!- PATHWAY: Asparagine blosynthesia.
-|- SIMILARITY: Belongs to the asparagine synthetase family.
-!- SIMILARITY: Contains 1 type-2 glutamine amidotransferase domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CHARACTERIZATION.

-!- CATALYTIC ACTIVITY: ATP + L-citrulline + L-aspartate = AMP +
-(aphosphate + (Nomega)-L-arginino) succinate.
-!- PATHWAY: Arginine biosynthesis; seventh step.
-!- SUBUNIT: Homoterramer (By similarity).
-!- SUBUNIT: Homoterramer (Capisamic (Probable).
-!- SIMILARITY: Belongs to the argininosuccinate synthase family. Type
1 subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

gaparagine synthase homolog yis0 - Bacillus subtilis
C;Species: Bacillus subtilis
C;Accession: F6937
R;Kunst, F.; Ogasawara, N.; Moszer, I.; Albertini, A.M.; Alloni, G.; Azevedo, V.; Berre
C;Accession: F6937
R;Kunst, F.; Ogasawara, N.; Moszer, I.; Albertini, A.M.; Alloni, G.; Azevedo, V.; Carter, N.M.; Christ, S.D.; Erriolise, G.V.; Carter, N.M.; Carter, N.M.; Carter, N.M.; Carter, N.M.; Carter, B.; Capuano, C.; Ferrari, E.
Nature 390, 249-256, 1997
A;Authors: Polliger, D.; Fritz, C.; Fullta, M.; Fullta, K.; Fupidus, A.; Galizzi, A.; Galize, C.; Fortanio, S.; Munors: Lauber, J.; Lazarevic, V.; Fur, S.; Kumano, M.; Kurita, K.; Lapidus, A.; Lardinois
A;Authors: Lauber, J.; Lazarevic, V.; Lee, S.M.; Levine, A.; Liu, H.; Masuda, S.; Mauce
Y, M.; Ogawa, K.; Ogiwara, A.; Odoceter, R.; Roche, B.; Rose, M.; Sadaie, Y.; Sato, T.; Scanlon, A;Authors: Schleich, S.; Schroceter, R.; Scoffone, F.; Scklyderi, J.; Sexowaka, A.; Scoffone, F.; Scklyderi, J.; Sckowaka, A.; Scoffone, F.; Scklyderi, J.; Sckowaka, A.; Scoffone, T.; Winters, P.; Wipat, A.; Yamamoto, H.; Yamane, K.; Yasumoto, K.; Yata, K.; Yoshida, A; Atthers: Yoshikawa, H.F.; Zumametoin, R.; Yoshikawa, H.F.; Zumametoin, M.; Zhan, P.; Manametoin, A; Reference number: Assesso; MUID:99044033; PMID:9384377
A; Accession: Propromited persones sequence of the Gram-positive bacterium Bacillus subtilis.
A; Accession: Propromited persones acquence of the Gram-positive bacterium Bacillus subtilis.
A; Accession: Propromited persones acquence of the Gram-positive bacterium Bacillus subtilis.
A; Accession: Propromited persones acquence of the Gram-positive bacterium Bacillus subtilis.
